Job Application for Software Engineer, Open Source Project

Dear Google,

About Me

I'm Erik Dubbelboer. I was born in Utrecht in the Netherlands. When I was 16 I started programming computers, building an AI for Half-Life in C++, a year later I created my own simple multi-tasking operating system. Before I was done with my studies I had already founded multiple companies with friends. One of these companies led me to live in Kuala Lumpur, Malaysia where I met my wife. My current company Atomx.com is coming to an end and I'm ready for a new challenge.

Why Google and me?

I have more than 4 years of intensive experience writing Go code. For Atomx.com I wrote 80704 lines of high performance Go code that was responsible to handling thousands of requests with millisecond latencies. I'm a big fan of Open Source software. I have created and contributed to many Open Source projects. The position looks interesting and a good fit for me.

Sincerely,

Erik Dubbelboer
